

STAY SAFE AND KEEP IT CLEAN

Honeywell Miller® Harness
Cleaning Recommendations

For your safety, it is important to follow general safety guidelines as well as recommendations for the proper way to clean and disinfect Honeywell Miller® Fall Protection equipment.

GENERAL HARNESS SAFETY GUIDELINES

- 1. Warnings** – Always read all instructions and warnings.
- 2. Inspection** – All fall protection equipment must be inspected prior to each use.
- 3. Training** – All workers should be trained by a *Competent Person*.
- 4. Regulations** – Understand all Federal, State, Local, and Provincial regulations pertaining to fall protection before selecting and using the equipment.
- 5. Rescue Planning** – Minimize the time between a fall occurrence and medical attention with a rescue plan.
- 6. After a Fall** – After a fall occurs, all components of the fall arrest system should be removed from service.
- 7. Work with a Safety Professional** – Reach out to your Honeywell Miller Safety Professional with any questions.

See our recommendations for cleaning harnesses on the following page.

CLEANING PROCEDURES FOR HONEYWELL MILLER® BRAND BELTS, HARNESSES, AND LANYARDS

Spot Clean

To spot clean Honeywell Miller® belts, harnesses, and webbed lanyards, we recommend using a damp sponge or cloth along with a mild detergent that **does not include bleach**.

Complete Wash

To wash Honeywell Miller belts, harnesses, and webbed lanyards in a commercial washing machine, we recommend the following procedure:

- A.** Place products to be cleaned in mesh laundry bags to reduce the chances of abrasion, snagging, and entanglement that could cause damage to stitching or labels.
- B.** Wash in cold or warm water that does not exceed 135°F.
- C.** Use a **mild** soap or detergent that **does not include bleach**.
- D.** Wash on a regular wash and rinse cycle.
- E.** Remove items from mesh bags and hang freely to dry away from excessive heat, steam, or long periods of direct sunlight. **Do not machine dry!**

Inspect products thoroughly before returning to service. See our Product Inspection Guide for reference.

Note: Machine washing may cause fading and softening of the webbing and may reduce the useful service life of the product. Be sure to inspect your washed products thoroughly before use.

We do not recommend that workers share Personal Protective Equipment (PPE). It is recommended that each employee be provided their own set of PPE. Most equipment is fitted specifically for certain individuals and it is best if protection equipment is inspected before every use.
