

CAN YOU INSTANTLY DETERMINE WHERE YOUR WORKERS ARE AND WHETHER THEY'RE SAFE?

Real-time situational awareness is becoming a critical part of safety compliance. When you can remotely monitor your portable gas detectors, vital safety data is no longer limited to the worker wearing the device. Instead, you can check gas readings, worker location and other data at any time – from any device with an internet connection – so you can protect your workers and your plant.

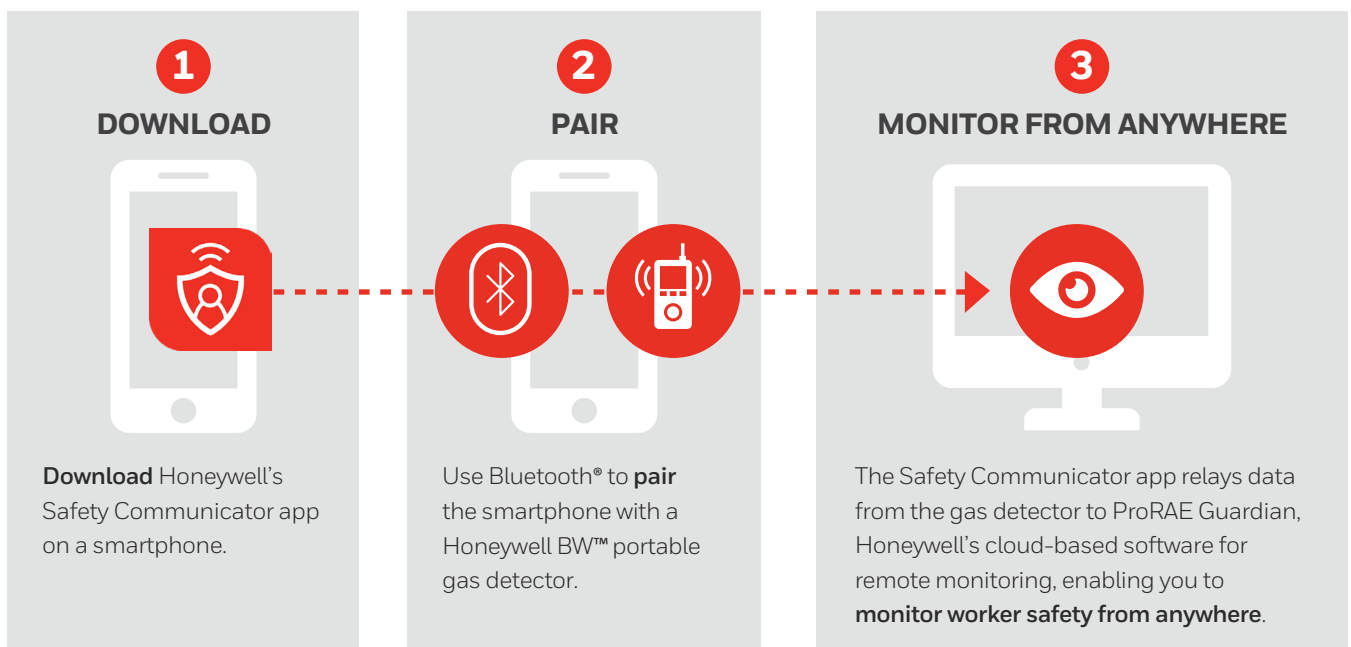

Remote monitoring of portable gas detectors enables you to:

- **Respond quickly.** Whenever a gas detector goes into alarm, you will get an instant alert so you can easily determine which workers were affected, rescue a man down, plan the right response, disseminate information and avoid sending other workers into a dangerous situation.
- **Prevent downtime.** With in-the-moment data from your workers' gas detectors, you can determine the precise gas concentration in an area to prevent unnecessary shutdowns or evacuations. Also prevent costly downtime due to noncompliant detectors or misinterpreted readings.
- **Provide workers with peace of mind.** With remote monitoring, workers can rest assured that someone has their back, so they can work confidently and productively in hazardous areas.
- **Automate your compliance administration.** Which detectors have had gas exposures? Have they been bump tested on schedule? With remote monitoring, you can verify compliance, see automatic logs of gas incidents, and more. No need to manually track down detectors for inspection.

3 STEPS TO REAL-TIME SITUATIONAL AWARENESS

Honeywell makes it easy to remotely monitor the gas readings on portable detectors:

Remote monitoring through Safety Communicator is available for the following Honeywell BW portable gas detectors:

Honeywell BW™ Solo

Honeywell BW™ MicroClip XL

Honeywell BW™ MicroClip X3

Honeywell BW™ Max XT II

Honeywell BW™ Ultra

By adding the Honeywell BW™ Connect adapter

PROTECTING WORKER PRIVACY

Remote monitoring of gas detector data is about keeping workers safe, not about looking over their shoulder. So your workers can feel confident that if they're in distress, someone can easily determine their location – without monitoring their every move throughout the shift.

KNOW YOUR WORKERS' SAFETY STATUS AT ALL TIMES

To learn more about remote visibility on Honeywell BW™ portable gas detectors, please contact 00800 333 222 44.
