

SAS REAL-TIME VISIBILITY FOR COMPLIANCE

As a global leader in safety technology, Honeywell Salisbury is developing connected solutions that give you real-time safety awareness, so you have the right information at the right time to make better decisions and Worker Compliance is part of that focus. With real-time visibility for safety compliance, you can ensure that every worker is ready for the job at hand.

SafetySuite Connected Worker

Honeywell Salisbury is now part of the connected worker innovation wave by using Honeywell's proprietary "Safety Suite." Safety Suite is a system of smart applications, accessible through multiple devices taking advantage of secure cloud storage to maintain and organize the data safety professionals rely upon. This value can be found in the arc flash labels which are now part of the deliverable from the arc flash assessments we offer. This technology will assist with reducing safety incidents, streamline compliance administration and improve productivity within your facility.

Benefits

- Completing paperwork and keeping accurate, updated records is a far more efficient process by minimizing the need for manual transcription.
- Allows safety teams to better manage Personal Protective Equipment to ensure workers have what is needed as well as to confirm they are wearing the proper PPE they need for each job.
- Lowers the risk of noncompliance by creating intuitive and customizable control points for full visibility.
- Improves operational efficiencies of the electrical safety function by reducing paperwork and information in multiple systems.
- Helps to promote safety as a valued, respected part of the organization.

Application Examples

- Assign "Job Functions" and manage work permits for Qualified workers by Incident Energy and Voltage.
- Track and assign training requirements to stay up-to-date with standard.
- Keep all records (Arc Flash Assessments, training certificates, inspection records, maintenance documentation, etc) in single platform
- On-Demand Data access to equipment from smart labels including single line diagrams, technical data, PPE requirements, maintenance notes, among other data.
